Sir, as a common citizen of this nation, I want to draw your kind attention towards two matters of urgency, that are needed to be finished as soon as possible (ASAP).

1=IUC charges on making calls to other networks, it has unnecessarily increased our monthly expenditure on telecom services. It's of no use in this era when, India is gearing up for 5G technology, the companies, who cannot even integrate their networks to 4G after such a long time given by you, are good for nothing. So, stop this IUC charges ASAP, in the deadline that you have given i.e. January 2020, this will also maintain the credibility of "TRAI".

2=NFC charges are also working like a monster, unnecessarily increasing our monthly cable bill, Rs.150+ NFC is never justified, Sir, in any developing nation. My personal cable bill has increased from Rs.280 to Rs.330 (with having much less channels than I used to have earlier). Or at least make it upto Rs.50 (incl.of all taxes), although best will be to finish it completely.

So, Sir these are my two suggestions to improve Telecom & Television (DTH) services in India:

1. Finish IUC charges in telecom services in your given deadline.
2. Finish or Low the NFC charges in television services.

Thank You!
