Hi,

I would like to make my point on the reply by Airtel. Airtel suggest that broadband should be classified as 64kbps internet connection as per by Airtel 64kbps is enough for a modern user. However given that almost all other countries are increasing their defination of broadband speed for kbps to mbps while on other hand our telco is trying to re-define the broadband speed to 64kbps which is not only unacceptable but also useless. For a fun fact: **Make In India** webpage is approx 4MB big - and will take 8.5 mins to open at 64kbps.
